

Tabletop Kit (US, 1-Gang)

VK101

The VK101 is a 1-gang US-type tabletop kit that takes the flexibility of ATEN's control system solutions (e.g. VK0100* and VK108US*), touch panels (e.g. VK320), remote control pads (e.g. VPK104), and transmitters (e.g. VE1801AUST) to the next level. It is also compatible with any 3rd party US type device. By tilting the device attached to the VK101 at an ergonomic angle, the VK101 helps reduce the force needed when one presses the device's keys or connects cables to the device's ports. With screw holes that ensure secure attachment to the surface, the VK101 supports desk mounting and wall mounting to meet versatile installation needs. The anti-slip rubber at the bottom provides extra grip. The VK101 comes with ample space that allows for cable routing through either the rear opening or the bottom, making cable management easier while optimizing space usage. Its sleek, elegant design adds aesthetics to the control pads of various color editions (black or white). Built to compliment the control system solutions, the VK101 is suitable for conference rooms, lecture halls, digital podiums / lecterns, and any other applications that require desk / wall mounting installation.

Note: When the VK0100 / VK108US is mounted on the VK101, power is supplied only through PoE.
